

# Python

---

## ASSIGNMENT 6

STUDENT NAME: TELORE GANESH BHASKAR | GT  
ROLL NO:  
CLASS: TYBBACA  
GUIDE: PROF.LANDE R.D  
ASSIGNMENT BASED ON:

## ASSIGNMENT 6

### SET-A

Q.1 Write a python program to demonstrate multilevel inheritance by using Base class name as "Team" which inherits Derived class name as "Dev".

**Ans:**

class Team:

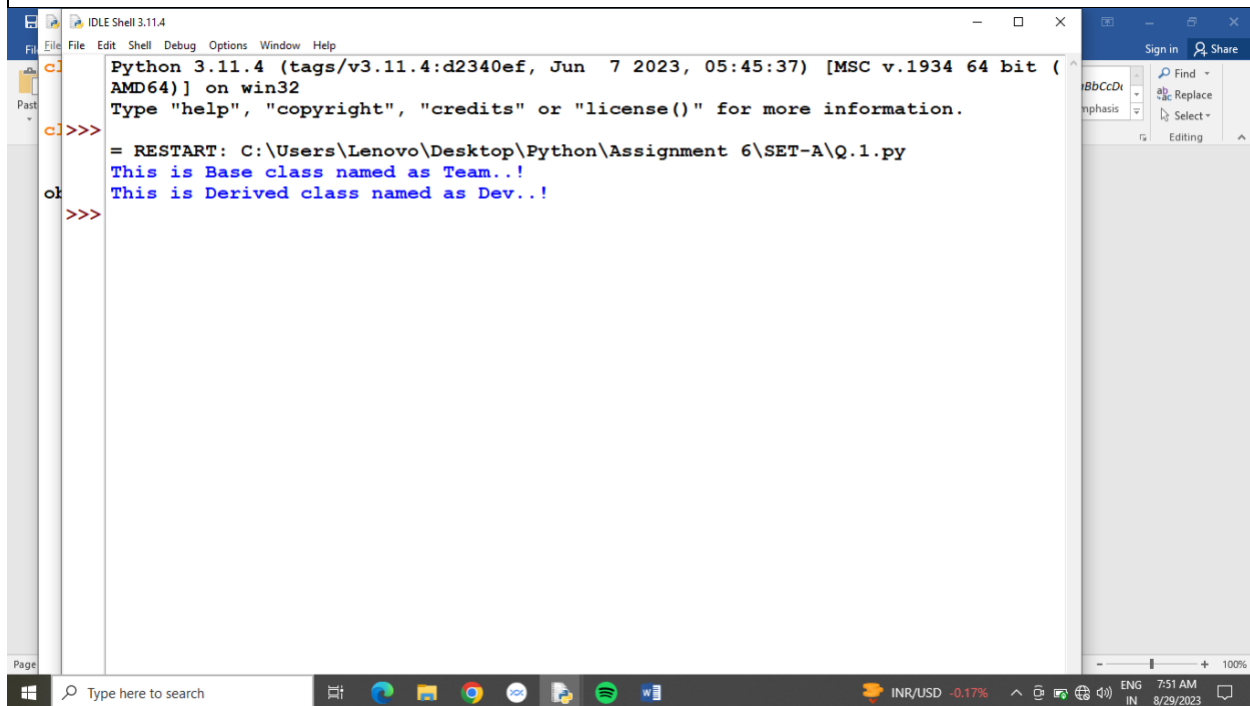

```
    print("This is Base class named as Team..!")
```

class Dev(Team):

```
    print("This is Derived class named as Dev..!")
```

obj=Dev()

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.

>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-A\Q.1.py
This is Base class named as Team..!
This is Derived class named as Dev..!
>>>
```

## ASSIGNMENT 6

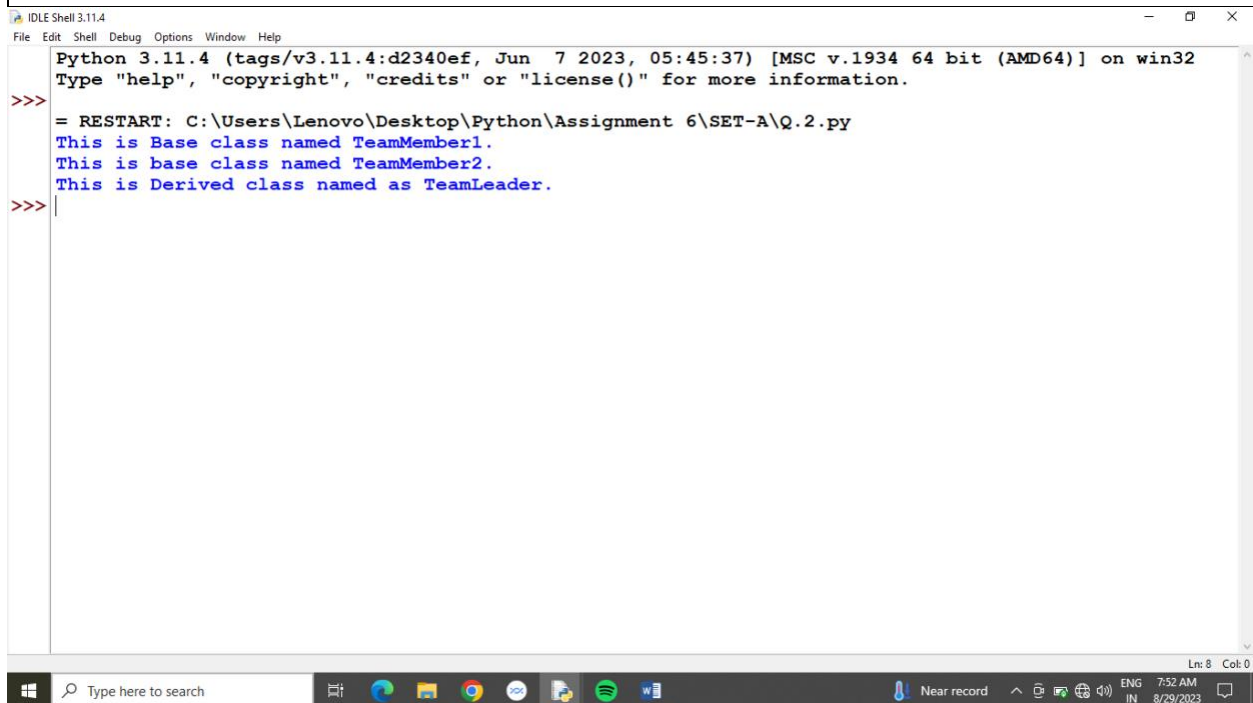

### SET-A

Q.2 Write a python program by considering Baseclass as TeamMember and Derived class as TeamLeader use multiple inheritance concept to demonstrate the code.

**Ans:**

```
class TeamMember1:  
    print("This is Base class named TeamMember1.")  
  
class TeamMember2:  
    print("This is base class named TeamMember2.")  
  
class TeamLeader(TeamMember1,TeamMember2):  
    print("This is Derived class named as TeamLeader.")  
  
obj=TeamLeader()
```

Output:

```
IDLE Shell 3.11.4  
File Edit Shell Debug Options Window Help  
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32  
Type "help", "copyright", "credits" or "license()" for more information.  
>>>  
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-A\Q.2.py  
This is Base class named TeamMember1.  
This is base class named TeamMember2.  
This is Derived class named as TeamLeader.

## ASSIGNMENT 6

### SET-A

Q.3 Write a python program to make use of `issubclass()` or `isinstance()` functions to check the relationships of two classes and instances.

**Ans:**

```
class demo1:
```

```
    a=12
```

```
class demo2(demo1):
```

```
    b=10
```

```
var1=issubclass(demo2,demo1)
```

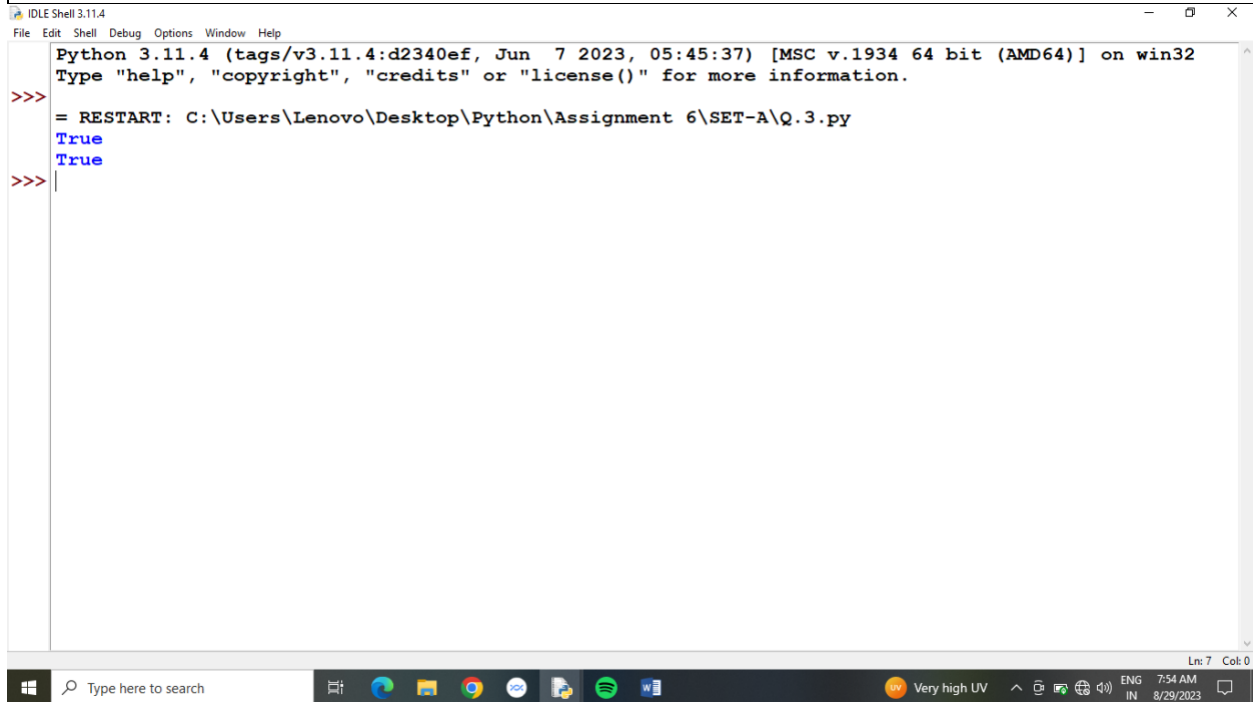

```
print(var1)
```

```
obj=demo1()
```

```
var2=isinstance(obj,demo1)
```

```
print(var2)
```

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-A\Q.3.py
True
True
>>>
```

The screenshot shows a Windows 10 desktop. At the top, there is a taskbar with various application icons including File Explorer, Google Chrome, and Microsoft Word. Below the taskbar, a Python IDLE Shell window is open. The window title is 'IDLE Shell 3.11.4'. The main text area shows the execution of a Python script. The script defines two classes, `demo1` and `demo2`, and uses `issubclass` and `isinstance` to check their relationships. The output shows `True` for both checks. The status bar at the bottom of the IDLE window shows 'Ln: 7 Col: 0'.

## ASSIGNMENT 6

### SET-B

Q.1 Write a python program to inherit (Derived class) "course" from (base class) "University" Using hybrid inheritance concept.

**Ans:**

```
class University:
    print("This is Base Class named as University.")

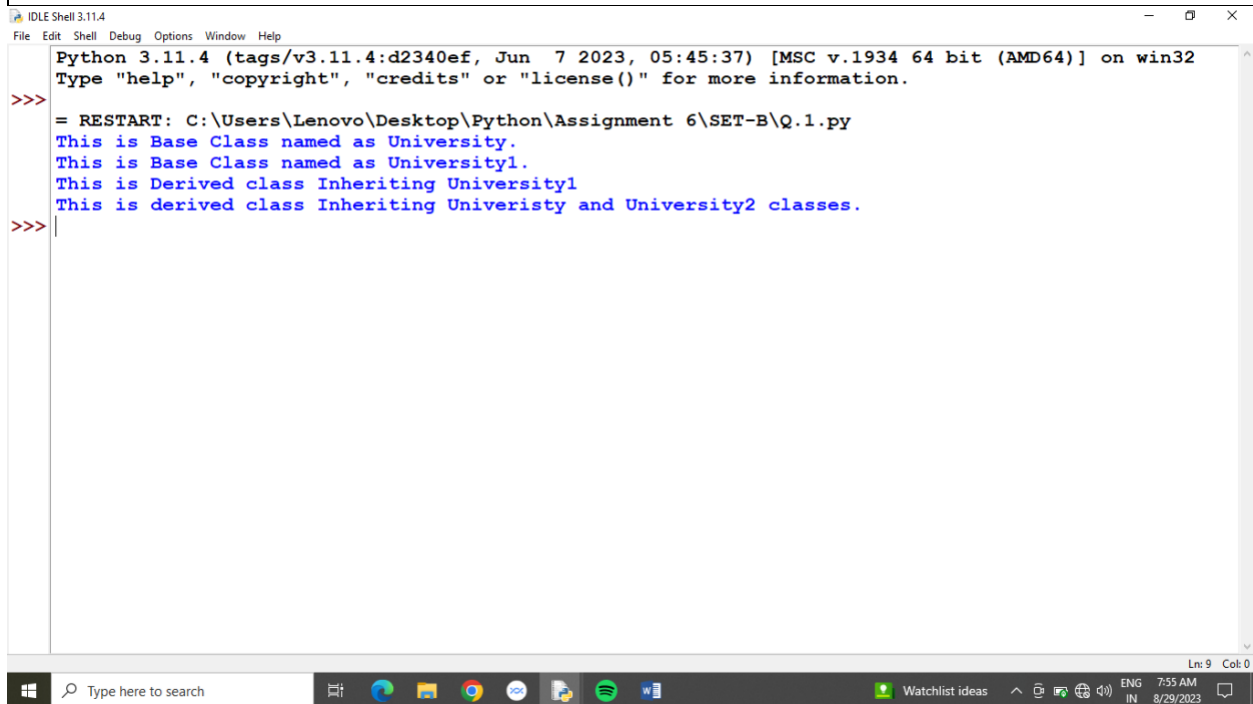

class University1:
    print("This is Base Class named as University1.")

class University2(University1):
    print("This is Derived class Inheriting University1")

class course(University,University2):
    print("This is derived class Inheriting Univeristy and University2 classes.")

obj=course()
```

Output:

```
IDLE Shell 3.11.4
File Edit Shell Debug Options Window Help

Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-B\Q.1.py
This is Base Class named as University.
This is Base Class named as University1.
This is Derived class Inheriting University1
This is derived class Inheriting Univeristy and University2 classes.
>>>
```

## ASSIGNMENT 6

### SET-B

Q.2 Write a python program to show the Hierarchical inheritance of two or more classes named as "Square" & "Triangle" inherit from a single Base class as "Area".

**Ans:**

```
class Area:
    print("Area of :")

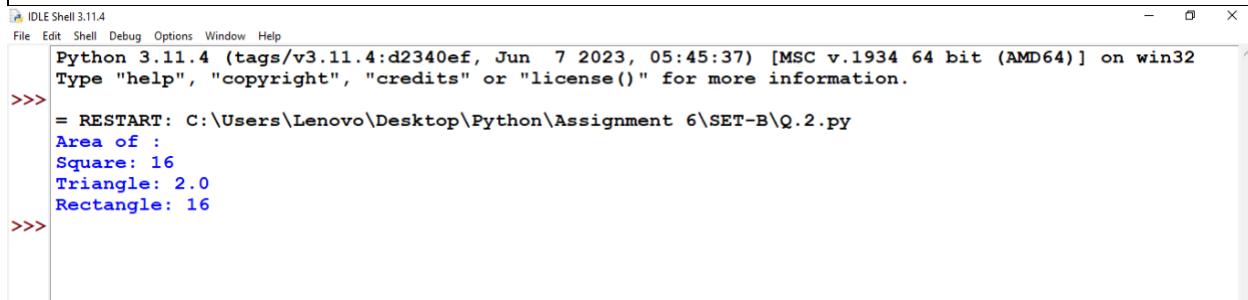

class Square(Area):
    def getsquare(self,side):
        self.side=side
        area=side*side
        print(f"Square: {area}")

class Triangle(Area):
    def gettriangle(self,base,height):
        self.base=base
        self.height=height
        area=0.5*base*height
        print(f"Triangle: {area}")

class Rectangle(Area):
    def getrectangle(self,length,breadth):
        self.length=length
        self.breadth=breadth
        area=length*breadth
        print(f"Rectangle: {area}")

obj=Square()
obj.getsquare(4)
obj1=Triangle()
obj1.gettriangle(2,2)
obj3=Rectangle()
obj3.getrectangle(4,4)
```

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-B\Q.2.py
Area of :
Square: 16
Triangle: 2.0
Rectangle: 16
>>>
```

## ASSIGNMENT 6

### SET-B

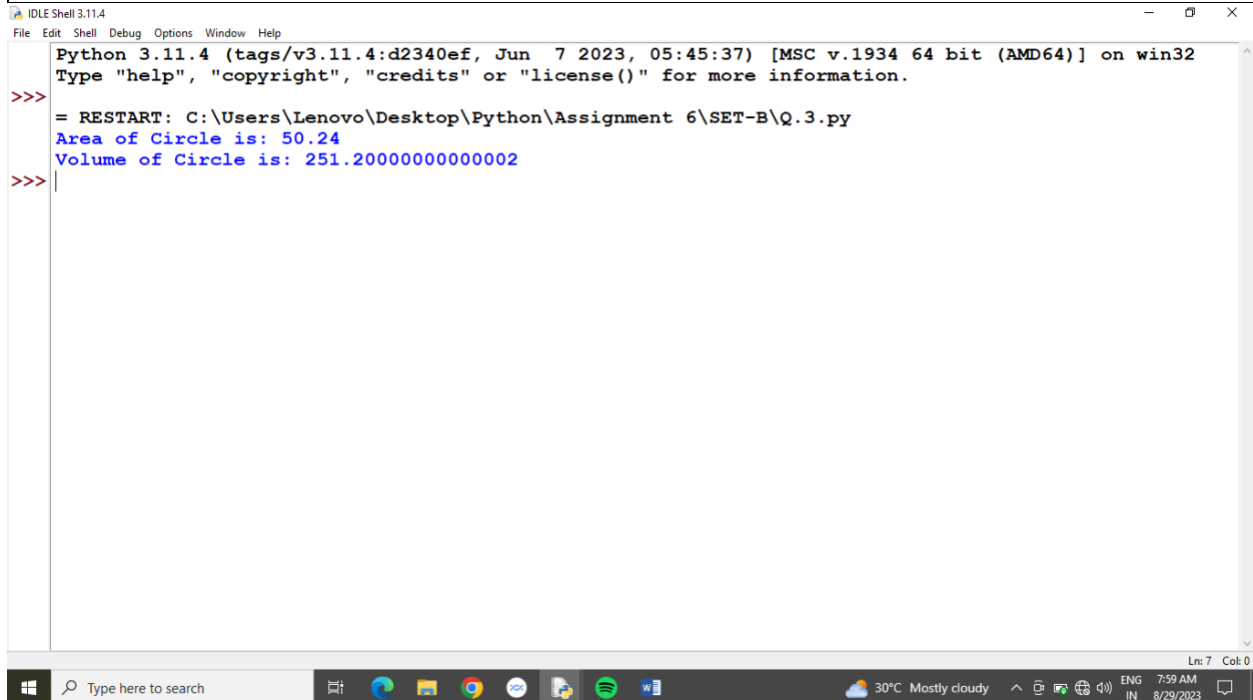

Q.3 Define a class named Shape and its subclass (Square/Circle). The subclass has an init function which takes an argument (length/radius). Both classes have an area and volume function which can print the area and volume of the shape where Shape's area is 0 by default.

**Ans:**

```
class Shape:
    area=0
    pi=3.14
class Circle(Shape):
    def __init__(self,radius,height):
        self.radius=radius
        self.height=height
    def area(self):
        self.area=self.pi*self.radius*self.radius
        print(f"Area of Circle is: {self.area}")
    def volume(self):
        volume=self.pi*self.radius*self.radius*self.height
        print(f"Volume of Circle is: {volume}")

obj=Circle(4,5)
obj.area()
obj.volume()
```

Output:

```
IDLE Shell 3.11.4
File Edit Shell Debug Options Window Help
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-B\Q.3.py
Area of Circle is: 50.24
Volume of Circle is: 251.20000000000002
>>>
```

Ln: 7 Col: 0

## ASSIGNMENT 6

### SET-B

Q.4 Python Program to Create a Class in which One Method Accepts a String from the User and Another method Prints it. Define a class named Country which has a method called print Nationality. Define subclass named state from Country which has a method called print State . Write a method to print state, country and nationality.

**Ans:**

```
class demo:
```

```
    def accept(self):
```

```
        self.x=input("Enter a String :")
```

```
    def display(self):
```

```
        print(f"Given String is :{self.x}")
```

```
class country:
```

```
    def accept(self):
```

```
        self.country=str(input("Enter country :"))
```

```
        self.nationality=str(input("Enter nationality :"))
```

```
    def displaycountry(self):
```

```
        print(f"Country is :{self.country}\n Nationality is :{self.nationality}")
```

```
class state(country):
```

```
    def accept(self):
```

```
        self.state=str(input("Enter the state :"))
```

```
    def displaystate(self):
```

```
        print(f"State is :{self.state}")
```

```
demo=demo()
```

```
demo.accept()
```

```
demo.display()
```

```
country=country()
```

```
country.accept()
```

```
country.displaycountry()
```

```
state=state()
```

```
state.accept()
```

```
state.displaystate()
```

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:/Users/Lenovo/Desktop/Python/Assignment 6/SET-B/Q.4.py
Enter a String :Ganesh
Given String is :Ganesh
Enter country :India
Enter nationality :Indian
Country is :India
Nationality is :Indian
Enter the state :Maharashtra
State is :Maharashtra
>>>
```

## ASSIGNMENT 6

### SET-C

Q.1 Write a Python Program to depict multiple inheritance when method is overridden in both classes and check the output accordingly.

**Ans:**

class A:

```
    print("This is Base Class 1.")
```

```
    def show1(self):
```

```
        print("Hello GT.")
```

class B:

```
    print("This is Base Class 2.")
```

```
    def show1(self,x):
```

```
        self.x=x
```

```
        print(f"Hello {x}")
```

class C(A,B):

```
    print("Results are: ")
```

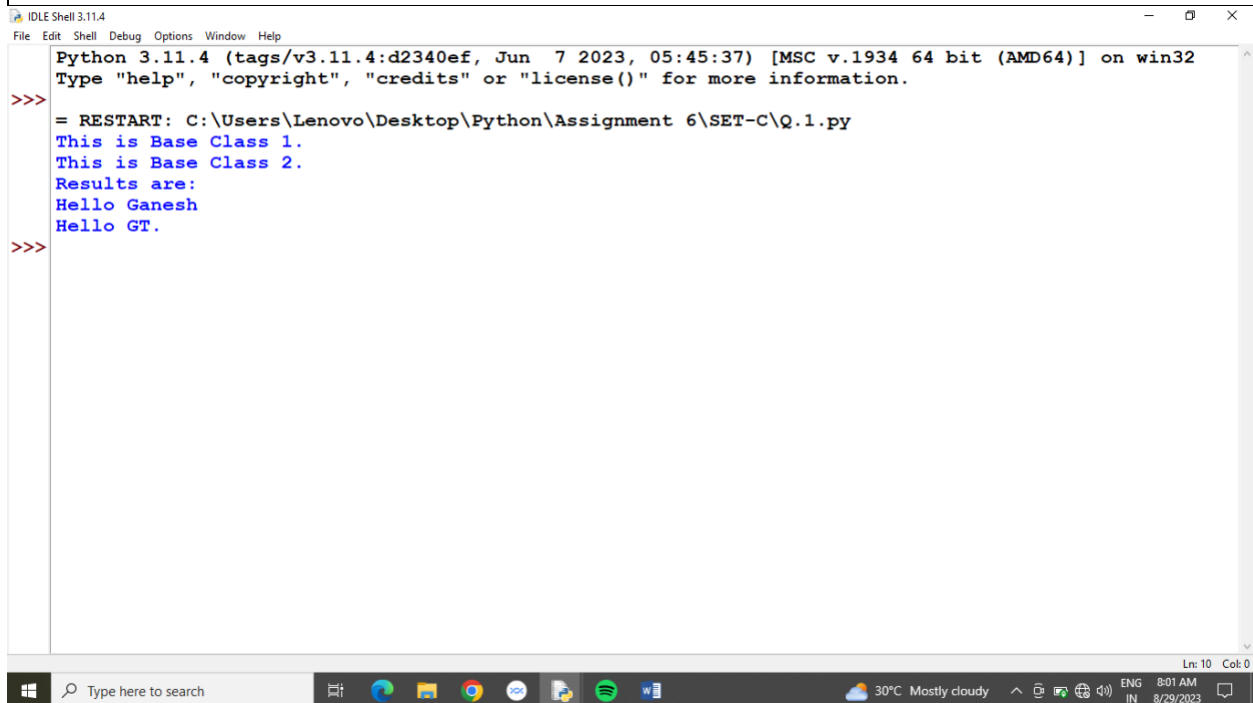

```
    obj1=B()
```

```
    obj1.show1("Ganesh")
```

obj=C()

```
obj.show1()
```

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-C\Q.1.py
This is Base Class 1.
This is Base Class 2.
Results are:
Hello Ganesh
Hello GT.
>>>
```

## ASSIGNMENT 6

### SET-C

Q.2 Write a Python Program to describe a HAS-A Relationship(Composition).

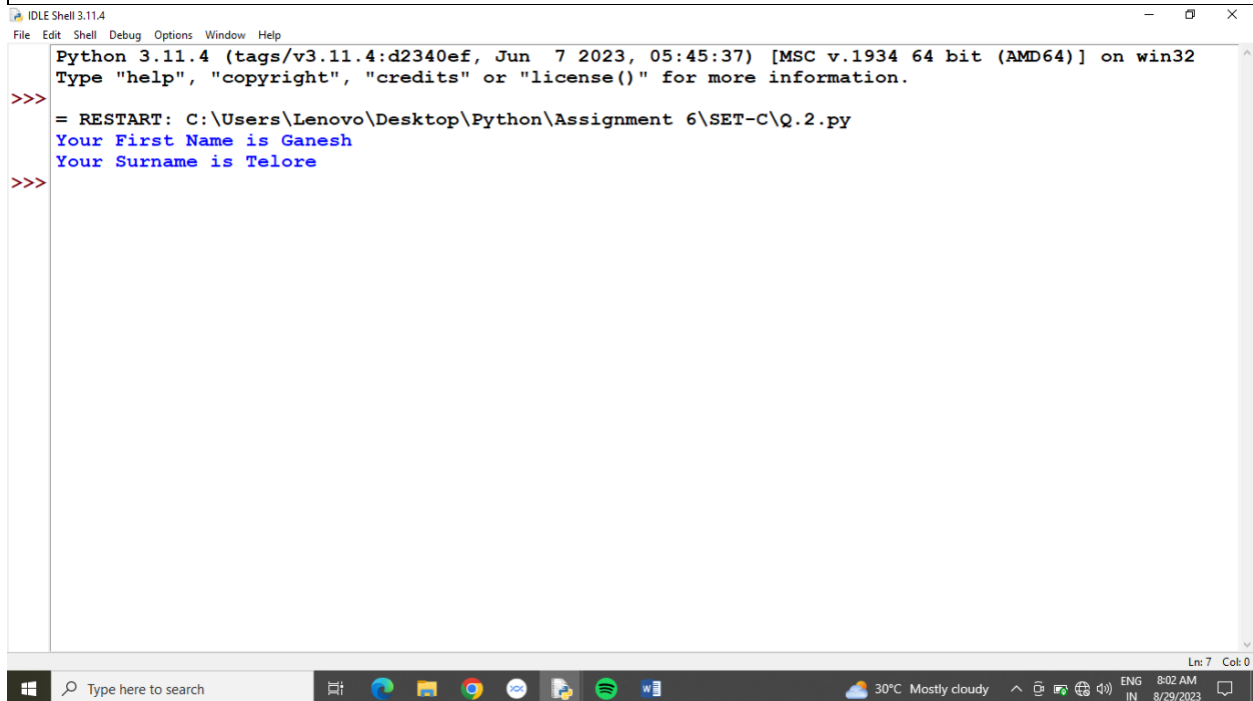

**Ans:**

```
class demo1:
    def __init__(self,x):
        self.x=x
    def call(self):
        print(f"Your First Name is {self.x}")

class demo2:
    def __init__(self,y):
        self.y=y
    def call2(self):
        print(f"Your Surname is {self.y}")
    obj=demo1("Ganesh")
    obj.call()

obj1=demo2("Telore")
obj1.call2()
```

Output:

```
Python 3.11.4 (tags/v3.11.4:d2340ef, Jun 7 2023, 05:45:37) [MSC v.1934 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>>
= RESTART: C:\Users\Lenovo\Desktop\Python\Assignment 6\SET-C\Q.2.py
Your First Name is Ganesh
Your Surname is Telore
>>>
```
